## Note on 41 cal. gas checks

There are three different gas checks for 41 cal. molds.

#1 41 Lyman type- the shank will measure .397 and is used on all 41 cal. Lyman molds and a few custom molds.

#2 416 – the shank will measure .393 and these gas checks fit 41 cal. RCBS, Saeco and some custom molds.

#3 41 BSS – the shank will measure .379. This is a new gas check that has been designed especially for 40 and 41 bullets. Many of the custom mold makers are now making molds for this improved 41 BSS checks

NOTE: the shank diameters may vary by one or two thousandths from the diameters listed above.
